Environmental Policy

Gentex Corporation is the recognized world leader in the manufacture of electrochromic, automatic-dimming automotive rearview mirrors and variably dimmable windows. With core competencies in electronics, chemistry, glass processing and assembly, Gentex pioneered auto-dimming mirror technology and dimmable aircraft windows. Gentex developed the world's first commercially successful electrochromic mirror, an active, crash-avoidance safety feature making nighttime driving safer, and electrochromic aircraft windows that have five levels of transparency, controlled by seat occupants or the flight crew.

Gentex is committed to protect the environment by meeting relevant environmental legal and other requirements, and to strive for continual improvement in our environmental performance by seeking out smarter ways to minimize waste and prevent pollution.

With respect to minimizing waste and preventing pollution, priority is given to those opportunities that offer the greatest anticipated practical benefit while striving for continual improvement. Accordingly, objectives and targets are established and periodically reviewed so as to minimize, to the extent practical, the creation of waste, pollution and adverse impacts on the environment associated with Company activities, products or services.

Protection of health and the environment is a Company-wide responsibility. Management of each activity is expected to support our environmental management system and commit the necessary resources. Team members at all levels are expected to carry out their responsibilities as established by our environmental management system and to cooperate in Company efforts.

Steve Downing
President and Chief Executive Officer
